

## **Section III – Inventories**

The purpose of this section is to inventory waste disposal facilities, incineration operations, transfer stations, waste reduction operations and opportunities provided by the District and private companies, composting facilities, and waste haulers which were used by the District during the reference year; and to provide a comprehensive list of the open dumps within the District for reference year 2009. The geographic location of facilities is shown on maps in Appendix E. The inventory section serves as the foundation upon which to build projections, assumptions, and program development throughout the planning period.

### **A. Reference Year: 2009**

In accordance with ORC 3734.56 (A), the District commenced the process to draft the amended plan at least 15 months prior to the mandatory submittal date which is March 9, 2012. By December 9, 2010, the date assigned to the District by Ohio EPA, the Policy Committee through the director assembled a team of District staff and other professionals associated with the District to begin the process of drafting the plan update. The District did not utilize the services of a private consulting firm. The reference year is the year prior to the official commencement of drafting the update, thus the District designated 2009 as the reference year. Ohio EPA Plan Format 3.0 was utilized.

### **B. Existing Solid Waste Landfill Facilities**

Table III – 1 lists the landfill facilities where Mahoning County-generated solid waste was disposed during the reference year. Solid waste transporters mainly used the three privately owned and operated landfills located in Mahoning County: Central Waste, Carbon Limestone, and Mahoning Landfill of which 98.2% of the total landfilled solid waste as reported in the Ohio EPA 2009 Facility Data Report was placed. Transporters also used landfills in neighboring counties for the remainder of the disposed amount: American landfill, Countywide Disposal, Kimble Landfill, and Lake County Solid Waste Facility (Table III-1). A map specifying the location of the in-district landfills is in Appendix E. Landfill data and the information regarding remaining disposal capacity was collected from the Ohio EPA 2009 FDR and confirmed through District contact, either via phone or in-person, with the facilities.

In order to maintain current information from in-district located landfill facilities, in addition to the detailed monthly reporting requirement required for all designated facilities; the three landfill operators provide summaries of operations during the beginning of each Policy Committee (PC) meeting. This is a part of each PC meeting agenda.

Prior to the passage of RES 10-10-033 “Resolution for Designation for the Plan Update” in October 2010 which was thoroughly reviewed and approved to form by Assistant Prosecutor, Attorney Tim Tusek from the Mahoning County Prosecutor’s Office, with the requirement that each designated facility sign a designation agreement as required in the

original RES 94-471 (Appendix G) “Resolution of Final Designation” passed by the Board of Directors on June 16, 1994; Seneca Landfill in Mars, Pennsylvania made a goodwill gesture through an agreement (Appendix L) and sent periodic reports regarding tonnages of what they believed was District waste. However, after discussions with Ohio EPA officials in late 2010 regarding the 2009 Facility Data Report, it was decided that since we have no jurisdiction in Pennsylvania and can not confirm or verify the tons reported, we will not include Seneca tons. In addition, the District’s director after reviewing all relevant data concerning this matter was convinced that the amounts were already reported to Ohio EPA via a transfer station located in Trumbull County: Total Waste Logistics (Table III-3) which tonnages were then transported to Seneca – thus double counting. This assumption is confirmed through the 2009 Facility Data Report which lists Seneca Landfill, Central Waste (Mahoning Co.) and Mahoning Landfill (Mahoning Co.) as the receivers all TWL transferred waste. As Seneca Landfill was not included in the 2009 FDR, it is not included in this Plan and thus no need for Table III-7 regarding out-of-state landfill facilities used by the District in 2009.

### **C. Existing Incinerators and Resource Recovery Facilities.**

No resource recovery or incinerator facilities operated within the District during the reference year. The Carbon Limestone landfill facility does operate a methane gas-to-energy plant on the landfill property. This began in 1996 and is projected to continue throughout the planning period. In 2007 an incinerator/waste-to-energy plant was proposed for operations in Smith Township by an out-of-state company either near or on the property of the Central Waste Landfill; however, the company withdrew such plans in 2010 and the incinerator/waste-to-energy plant will not be erected.

Table III-5 includes the Liberty Tire and Coal Tire Project in Stark County which confirmed acceptance of 2,281 tons of District-generated tires in 2009 for their waste-to-energy (WTE) facility. This is considered Resource Recovery – the conversion of solid waste into energy, which in Format 3.0 is included in the definition of Waste Reduction.

### **D. Existing Transfer Facilities**

The following transfer facilities were utilized by solid waste transporters for Mahoning County-generated solid waste during the reference year as listed in Table III-3: Environmental Transfer System, Inc., Total Waste Logistics, Akron Central Transfer Station, Kimble Transfer, and Cleveland Transfer Station – all located in neighboring districts. No transfer facilities located outside of Ohio were used by the District during the reference year, thus Table III-7 is not included. The transfer stations did not extract recyclable materials thus not considered materials recovery facilities (MRF). Total Waste Logistics ceased acceptance of solid waste in July 2011 as referenced in their correspondence to the director included in Appendix G.

### **E. Existing Recycling Activities**

To complete Tables III-4 and 5, the District utilized its massive recycling facility database that is regularly updated and includes the list of all facilities where Mahoning County-generated recyclable materials were processed in 2009. As per Format 3.0 and the information contained in the recycling survey sample, the District regularly consults with recycling facility personnel to update the database to make sure their processing capacity, list of accepted materials, and other relevant information is current and correct. The District has various reporting requirements from companies and facilities that are detailed below, thus ensuring accurate recycling data both for the reference year and future.

The District utilized the data on the monthly weight reports received from companies contracted by the District to provide services during the reference year that included Allied/Republic Waste Services and Cintas; information contained in the industrial and waste hauler surveys that are included in Appendix F and H; the quarterly mandatory overflow reports provided by the community recycling coordinators as a condition of their annual recycling program financial assistance (Sections IV and V); the mandatory monthly scrap metal processing facility reports as per the City of Youngstown Ordinance included in Appendix N; and through regular communications with all recycling facility operators including the two MRFs with the Greenstar facility opening in Poland Township in October 2010. The District used the database of reuse outlets maintained by the Youngstown State University (YSU) re:CREATE program, partially funded by the District, which is explained in detail in Section IV. “Reuse” is considered waste reduction under the term “Recycling” as per the definition in Format 3.0.

### **Curbside**

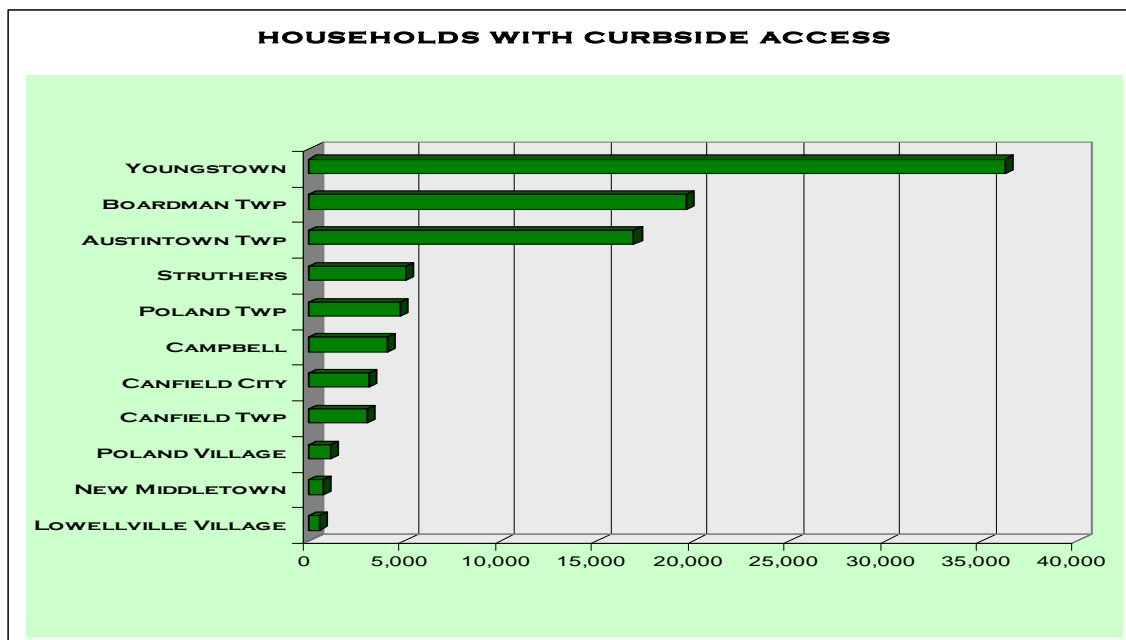

During 2009, monthly weight reports categorized by material, were completed and submitted by Allied/Republic Waste Services to the District for the curbside recycling program which is provided to residents in the cities of Campbell, Canfield, Struthers, and Youngstown; townships of Austintown, Boardman, Canfield, and Poland; and villages of New Middletown, Poland, and Lowellville as included in Table III-4. This is a non-subscription service which means all single-family household residents have access to the recycling program whether or not they participate. As detailed in further sections of this update, the curbside service is provided by Allied/Republic at no cost to residents or the District through the Carbon Limestone Landfill recycling agreement (Appendix J) negotiated and agreed upon in 1994 for the life of the landfill. Allied/Republic owns and operates the landfill, formerly BFI. During 2009, 3,793 tons of the following materials were collected in the curbside program: newspaper, magazines, catalogs, office paper, ad slicks, phone books, metal food and beverage cans, glass beverage bottles, and #1 thru #7 plastic beverage containers.

Table III-4 lists the average number of households participating at 47% of the total households included in the curbside coverage. The percentage was determined by reviewing numerous factors with officials at Allied/Republic that included the massive increase in bins requested and delivered each year since the last update which had a 40% participation rate. In discussing the situation with Allied/Republic, the fact that the routes take longer due to more participation and more material being recycled than in previous

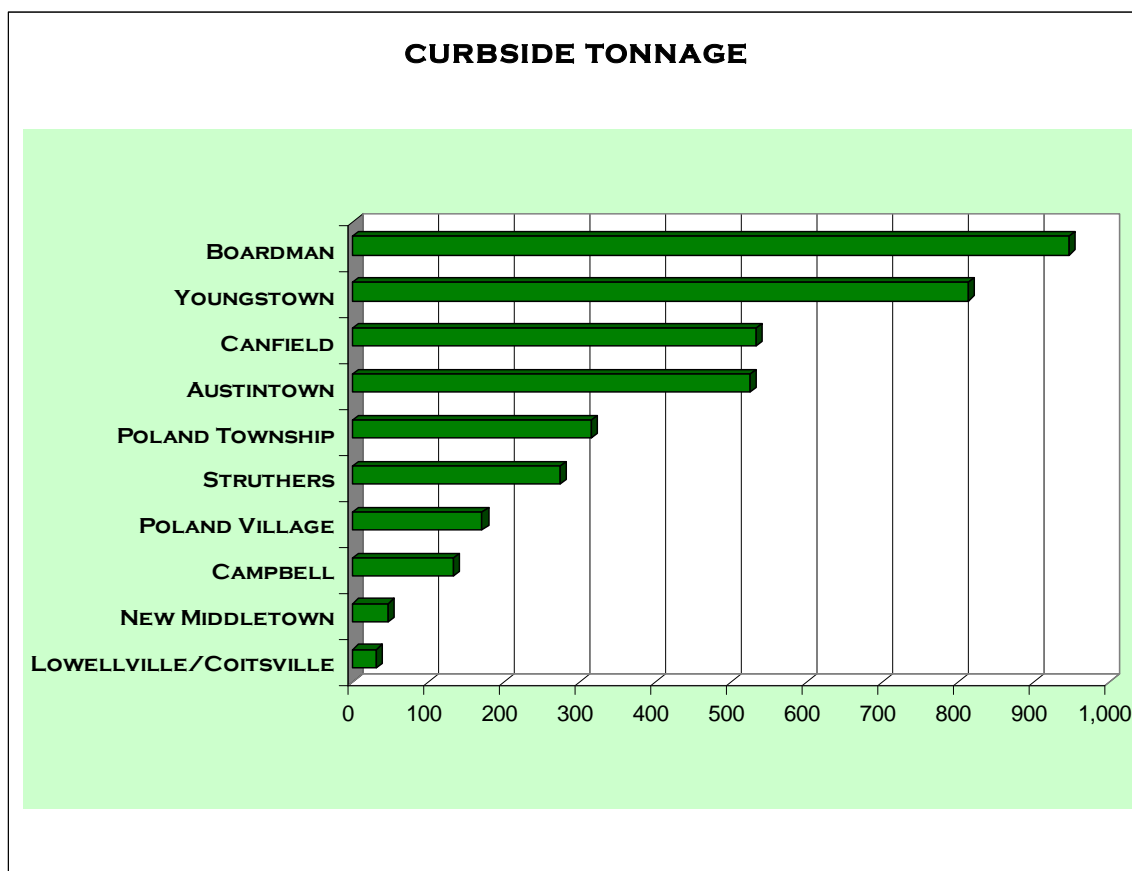

years, an increase was in order. In 2009 according to accurate records maintained by District staff, a total of 2,644 new curbside bins were delivered to residents; similar to years since 2005. Another factor that supports the participation increase is the acceptance of more materials since the last update, including #1 thru #7 plastic containers which was limited to just # 1 and #2 previously. Based on conversations with the service provider and data reviewed, the District believes the 47% participation rate is conservatively accurate.

### Reference Year Data for Curbside Recycling

<u>ENTITY</u>	<u># HOUSEHOLDS</u>

YOUNGSTOWN	814
BOARDMAN	947

### **Drop-off Sites**

Monthly recyclable weight reports divided by type of material were provided by Allied/Republic Waste Services, the contracted vendor for the 43 community recycling drop-off sites during the reference year. The materials were processed in the Greenstar MRF in Pittsburgh, PA., Alliance Recycling Center, and other private facilities as listed

in III-5. In late 2010, Greenstar opened its Poland Township facility which now processes all of the curbside and most of the drop-off materials. Materials accepted: 3,956 tons of newspaper, magazines, catalogs, office paper, bagged shredded paper, magazines, ad slicks, manuals, pamphlets, and related publications; cardboard, metal food and beverage cans, glass bottles, and plastic containers #1 thru #7 excluding Styrofoam.

### **Scrap Metal Processors**

During 2009, the District received monthly reports from the scrap metal processing facilities located in the City of Youngstown as per the 2005 Ordinance that mandated the reporting as a condition of licensing. The following facilities reported on a monthly basis: Divers Steel City, Metalico (formerly Youngstown Iron and Metal), Midwest Steel, Vivo Metals, Broadway Recycling, Chuck's Westside Recycling, and US Trading Company – all listed in Table III-5. The District made sure that no double-counting occurred and consulted with facility operators to verify that they did not transfer loads to other facilities that also reported. As instructed and enforced through visits from both District staff and the Litter Law Enforcement Deputies, the scrap metal processors separated industrially generated recyclable materials from residential/commercially generated materials. They did not include auto bodies, train boxcars, or construction and demolition debris loads in the recycling numbers and were well aware that only Mahoning County-generated metals were to be included. The Ordinance, Appendix N, requires accurate record keeping, a log that may be inspected by the Police Dept. and the District's director, and submittal of a monthly report to the director. Appendix N also includes the director's cover letter that specifies restrictions for each scrap metal processor that renews their license through the City of Youngstown Finance Department each year so that they maintain compliance with the Ordinance. The Youngstown Finance Dept. licensing and mandatory District reporting process has operated efficiently and productively since late 2005 and will continue throughout the Plan timeline. Section IV has a more extensive analysis of this source of weights.

NOTE: Even though several scrap metal buyback facilities list "auto bodies" as a category of metal that they accepted in Table III-5, in compliance with the City of Youngstown Ordinance referenced in the preceding paragraph, it is unallowable and a violation of the Ordinance to include "auto bodies" in their monthly reporting form. The District firmly believes that said facilities did not include auto bodies as they realized in 2009 and continuing currently that they would be in violation of the Ordinance and face serious legal repercussions.

### **Business Recycling Weight Reports**

During 2009, the District received monthly weight reports from Cintas, the company contracted to perform the Green Team Business Recycling Program route collection with 456 businesses included. A District staff member maintained an accurate spreadsheet to ensure the total commercial/institutional count was correct. The reported weights were free of double-counting as Cintas processed the paper and publications within their own company.

The Associated Paper Stock MRF located in North Lima, a Mahoning County community, began operations in 2008. The District received accurate weights from the MRF operator and made sure that double-counting did not occur. APS reviewed the sources of the recyclable materials that they received so that the same tonnages were not counted by two sources and reported to the District separately. The District receives updates from operators of the APS and Greenstar MRFs during each Policy Committee meeting as included in the agenda.

### **Special Drives and Weight Reporting**

Included in the residential/commercial recycling weights are those generated through the special recycling drives sponsored by the District during 2009. These included appliance recycling drives, electronics recycling drives, tire recycling drives, and a household hazardous waste drive (HHW). The private companies that conducted the individual drives provided the District with exact weight receipts so that no double-counting would occur. For example, Recycle Tech, an area electronics recycling company, conducted District electronics recycling drives and processed the materials through their own company thus avoiding the potential of double-counting.

Table III-5 is a comprehensive list of all the community drop-off recycling sites and curbside program, buybacks/brokers/MRFs, HHW, and other recycling activities conducted within the District during 2009. As referenced in the instructions in Format 3.0, one of the many mechanisms the District used to obtain data in Table III-5 regarding the tons processed by each facility was through surveys which may not always be accurate. Not all private recycling processors/facilities have a mandatory reporting requirement as those under contract with the District such as the curbside, business route, and drop-off providers, and those covered under the City of Youngstown Ordinance. The total for Table III-5 does not exactly match the amounts listed in Section IV which are based on actual reports received from facilities as per contacts and requirements – thus correct. Accurate residential/commercial and industrial recycling tonnage as per Section IV – 170,249 tons. The amount listed at conclusion of Table III-5 is 179,141 tons not including composted materials. Please note that although the District had estimated the weight from the backyard composting program at 78 tons, estimates are not acceptable for planning purposes in Updates. Thus the amount in Table III-5 is higher as would be expected. Format 3.0 clearly states to include all materials processed by each facility even though the same materials may be handled by more than one facility and that adjustments will be made in Section IV.

### **Reuse Weights**

Included in the waste reduction totals are the tonnages diverted from the solid waste stream through the YSU re:CREATE program which operates the “Mahoning Valley Materials Exchange”, often referred to as simply the Materials Exchange, and organizes community “Drop and Go” reuse events based on the nationally successful college and university “Dump and Run” program. Sarah Ellis, the Manager of the re: CREATE program diligently ensures the District that tonnages diverted from the solid waste stream and reused by non-profit organizations are not double-counted. Table III-5 credits YSU re:CREATE with 170 tons through the “Drop and Go” and other reuse events, and

separately listed are the tons processed by Goodwill, Salvation Army, and Planet-Aid all total at 2,442 tons. The Materials Exchange can not be credited with waste reduction since the 960 tons reported by the YSU re:CREATE Manager was fly ash and grate bottom ash.

Youngstown State University's recycling program manager, Dan Kuzma, submitted accurate monthly recycling weight reports to the District and prevented double-counting by listing all sources of data. The District's community recycling coordinators in each township, city, and village, provided the District with quarterly overflow reports that detailed all recycling activity where material was marketed separate from the community drop-off bins. For example, if a township conducted a special aluminum can drive and all the cans collected were taken to a private buyback center and not placed in the District's drop-off bins, then the overflow report would list those pounds and the vendor. The District made sure that the "special recycling drive" pounds did not get included in buyback center tonnages to prevent double-counting.

#### **Household Hazardous Waste - HHW**

In the reference year, one household hazardous waste collection event was held with Environmental Enterprises Inc., through the coalition of Northeast Ohio Solid Waste Districts, providing professional services to handle items accepted. Exact weights as per the language in the contract were obtained and the tonnage recycled is listed in III-5.

#### **As listed in Section IV:**

**The total tonnage of waste reduction credited for 2009: 170,249 tons**  
**Residential/Commercial – 59,533 tons (reuse, recycling, composting)**  
**Industrial – 110,716 tons (recycling)**

#### **F. Existing Composting and Yard Waste Management Facilities**

Table III-6 lists the composting and yard waste management facilities used to process the organic waste generated in the District during the reference year. There were 3 publicly available active sites: Custom Blended Soils, Dave Price Tree Service, and Uhrain Greenhouse, 5 captive active sites: Boardman Township, Struthers City, Saunders and Sons, Tree and Lawn, and YSU, and 1 captive inactive site: AFC Company. The Youngstown State University food waste composting project is a Class II site. The District did not obtain year-end composting data from AFC and Saunders & Sons directly although the latter did receive yard waste generated in Poland Township as reported to the District from the township in 2009. The total listed in Table III-6 is 4,025 tons. The registered composting facilities are regularly inspected by the Mahoning County Board of Health inspection program to ensure compliance with applicable regulations and laws, and the District receives copies of the results of the inspections to continue awareness of possible problems with a site not remaining in compliance and possible closure. The YSU Class II site is inspected by Ohio EPA officials. The District does not have knowledge of out-of-district composting sites being used in the reference year.

#### **G. Existing Open Dumps and Waste Tire Dumps**

As per the ORC, Section 3734.53 (A), open dumps are areas off the road or adjacent to the road or right-of-way, on which solid wastes are deposited, excluding the occasional debris or roadside litter that occurs throughout the county. Jennifer Jones, City of Youngstown Litter Control and Recycling Program (YLCR) Manager, assisted by Dan Kuzma and Sarah Ellis, YSU recycling and reuse program personnel, and District staff, conducted the lengthy study to determine the location of existing dumpsites throughout the District utilizing the dumpsite list provided by the Mahoning County Board of Health's Environmental Division. The list of 48 open dumpsites was confirmed by the Litter Law Enforcement Deputies discussed later in this update and the staff of the YLCR, and each site is identified in Table III-8. The following open dumpsites listed in the current Plan were cleaned and are no longer considered applicable to list.

1. Grandview and Perry – Yo.
2. Farnbauer and Queen – Yo.
3. 1233 Wilson Ave – Yo. (with assistance from ODNR – DRLP grant)
4. East of 886 Wilson Ave. – Yo.
5. Delason and Hillman – Yo.
6. Salt Springs Rd. W. of Leo – Yo.
7. South Ave between 913 – 1007 – Yo.
8. 916 Wabash – Yo.
9. N. Victoria Rd. – Yo.
10. Oak St. and Lane Ave. – Yo.
11. Worthington St. south section – Yo.
12. McCarthy at Plaza – Yo.
13. 1640 Kensington Ave. – Yo.
14. Wilson Ave. east of Center St. Auto – Yo.
15. 1812 Kensington Ave. – Yo.
16. 2302 Logan St. – Yo.
17. 51 Roslyn – Yo.
18. 1547 Elm St. – Yo.
19. Oak St. Ext. @ Lincoln Park – Yo.
20. SW Corner Oxford & Wirt St. – Yo.
21. Schenley Ave. at Palko – Yo.
22. Stewart and Lansdowne ravine – Yo.
23. 316 Chalmers Ave. – Yo.
24. 314 and 316 Carroll St. – Yo.
25. 122 N. Forest St. – Yo.
26. 2251 Kimmel St. – Yo.
27. 1027 Gray St. – Yo.
28. 3033 Gerwig St. – Yo.
29. 1019 Hoffman St. – Yo.
30. Josephine St. S. of Karl St. – Yo.
31. 2737 Hudson St. – Yo.
32. 2915 and 2759 Dearborn St. – Yo.
33. Lyden @ Gray St. – S. of Sharon Line Rd. – Yo.
34. SW Corner of Idlewood and Indianola St. – Yo.
35. Lot behind GE at Hughes and Williams – Yo.
36. Lot behind Hayes and Wayne St. – Yo.
37. 1654 Atkins Ave. – Yo.
38. 1168 Poland Ave. – Yo.

These sites were remediated through the aggressive participation of the YLCR program staff in cooperation with volunteers and private companies. In 2010, the District and the City of Youngstown applied for a Ohio Division of Recycling and Litter Prevention “Tire Amnesty Grant” in order to facilitate the clean up of the Wilson Ave. massive tire dump with an estimated 30,000 tires throughout 5 acres on the eastside of the city. ORC Section 1502.05, the Ohio Litter Control Law, authorizes the Ohio Dept. of Natural Resources to award such grants to communities. The Division did grant the funds and the site was thoroughly cleaned-up with tires removed and recycled by the end of 2010. The remaining 48 sites will be cleaned as funds permit, and the District will continue to seek ODRLP grant funds for sites listed with tires in Table III-8.

### **H. Ash, Foundry Sand, and Slag Disposal Sites**

The District does not have any licensed or unlicensed facilities for the disposal of fly ash, foundry sand or slag within its boundary, therefore, Table III-9 is not applicable.

### **I. Maps of Facilities and Sites**

Appendix E contains maps that detail the location of the landfill facilities, curbside recycling communities, composting facilities, MRF/brokers/buybacks, community drop-off locations, and illegal dumpsites – all located in the District in the reference year.

### **J. Existing Collection Systems – Haulers**

Table III-10 lists all solid waste haulers who operated in the District during the reference year, both in-district and out-of-district. The District’s staff conducted a waste hauler survey that was sent to 119 haulers. 61 Surveys were returned and reviewed in order to generate Table III-10 which is a complete list of haulers. The survey solicited information on collection routes, disposal sites, utilization of transfer stations, recycling activities and quantities of waste. The survey form is included in Appendix H. The District had a combination of small and large-scale haulers providing service in 2009 as indicated in the table. The District welcomes and encourages fair and open competition among haulers so they may compete cost-effectively and productively, thus giving an opportunity for residents, commercial entities, and industries to have excellent options.

In 2009, the Board of Health, with assistance from the District, required haulers to complete a “Waste Hauler’s Materials Management Plan” as a condition to renew or obtain their annual license. Please note that in late 2009, the State of Ohio’s Attorney General issued an Opinion that removed the authority of the Board of Health to license waste haulers, thus 2009 was the last year for this procedure. The information from the profile form (copy of form Appendix H) was used in concert with the survey information to generate Table III-10. The form required haulers to provide company information, identify the types of waste hauled and origin, types of recycling services offered if any, and their method to separate recyclable materials from non-recyclables.

### **Collection Methods**

District communities either contracted the service of collecting solid waste from residents, or instructed the residents to make arrangements with private companies for subscription service. Commercial and industrial entities made contractual arrangements

with haulers for the handling of their solid waste. The cities of Struthers, Campbell, and Youngstown contracted-out solid waste collection in 2009. There continues to be growing interest from certain trustees to contract-out township-wide trash collection so that their residents may realize a lower cost and provide an option for a variable rate or “pay as you throw” system. Currently, thousands of District residents realize significant cost savings through the “bag” system with Allied/Republic Waste Services, and other haulers are offering incentives for residents to reduce their solid waste generation level. The District highly supports and encourages residents to choose haulers that offer a variable rate system in order to motivate more waste reduction through recycling and composting. The District has attempted, and will continue to contact the officials of Campbell, Struthers, and Youngstown to encourage them to include a variable rate option in their bid specifications so that haulers may provide this opportunity to residents.

### **Collection of Recyclable Materials**

Haulers such as Allied/Republic that provide recycling collection services (Allied had the District’s curbside and drop-off contracts in 2009) have special trucks so that non-recyclable materials do not mix with cans and paper that have commodity value. From a purely economic standpoint, haulers realize that in addition to the ethical dilemma they would face by commingling recyclables with non-recyclables; the value of the recyclables would be greatly diminished by compromising the quality. Neither the APS MRF (operational in 2009), nor the more current Greenstar MRF (2010) will accept non-recyclable materials mixed with recyclables. Through phone and direct contact with buy-backs and other recycling facilities, none have indicated that they will accept a hauler’s load of co-mingled materials with recyclables mixed with material destined for disposal. This forces haulers that desire to collect compostable or recyclable materials to use properly equipped trucks.

**Notes:**

- "PA" -publicly available; "PUO"- private use only; "I"-industrial; "C"- commercial; "DO"-drop-off; "BB"- buyback; "BR"-recycling broker; "SY"-scrap yard; "HC"-hauler collection
- Percentages based on actual weight reports required through contracts, the Yo. Ordinance for scrap metal processors, and through verbal interviews/surveys with buybacks/brokers.
- Tonnage in this column is the Residential/Commercial or Industrial tons reported to the District by entity
- Numbers reported to the District exclude auto bodies, train box cars, and demolition activities  
Values presented in this table are not adjusted for double counting
- The Backyard Composting Seminars produced an estimate of 78 tons; however, estimates are not allowable for Plan Updates. Thus, the strategy has zero.
