- Largemouth bass feed almost exclusively on other fish; forage species should be stocked as a food source, i.e., bluegill.
- Perch should be stocked in newer ponds only, preferably without overflows, at a rate of 100 per acre
- Minnows can be stocked as a food source for bass.
- It is not recommended to stock minnows in ponds with existing bluegill population.
- The recommended stocking rate for minnows is 1,000 per acre.
- Stock recommended species in proper ratio: 100 bass, 100 crappies, 200 bluegill or 200 shell crackers and 100 catfish per surface acre of water.
